

**Amendments to the Specification:**

Please delete the paragraph beginning at page 9, line 8 and replace with the following replacement paragraph:

When used in a LAN networking environment, the computer 110 is connected to the LAN 171 through a network interface or adapter 170. When used in a WAN networking environment, the computer 110 typically includes a modem 172 or other means for establishing communications over the WAN 173, such as the Internet. The modem 172, which may be internal or external, may be connected to the system bus 121 via the user input interface 160, or other appropriate mechanism. In a networked environment, program modules depicted relative to the computer 110, or portions thereof, may be stored in the remote memory storage device 181. By way of example, and not limitation, FIG. 1 illustrates remote application programs 185 as residing on memory device 181. It will be appreciated that the network connections shown are exemplary and other means of establishing a communications link between the computers may be used.

Please delete the paragraph beginning at page 11, line 7 and replace with the following replacement paragraph:

The transitional pages 306, of which there could be several, come between the start page 304 and the final page 308. In addition to the other information and objects on a transitional page 306 such as dialog boxes, text and buttons, there is also a next-button 300a 300b and a back-button 302b 302a. ~~As previously discussed~~Similar to the next-button 300a, the next-button 300a300b provides navigation to the next page in the sequence i.e. another transitional page 306 or the final page 308. The back-button 302b 302a provides navigation to previous pages i.e. another transitional page or the first page 304, depending on the relative position of the transitional page 306.
